

Spam Experts Incoming Email Filter

A powerful solution to safeguard networks from inbound spam and malware, helping web hosts save time and money.

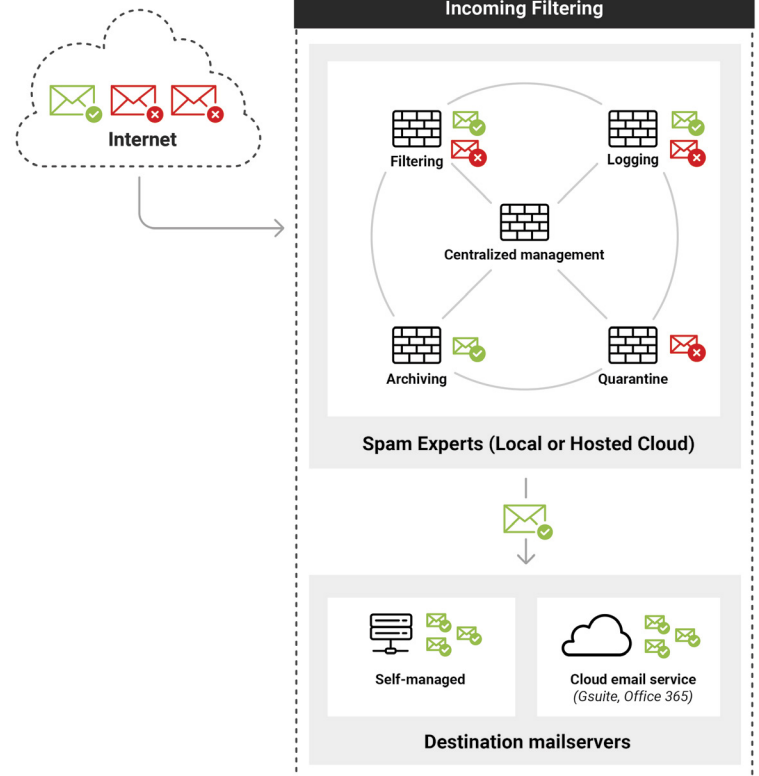

Inbound spam, ransomware, and phishing attempts can put any internet service provider at risk. SolarWinds® Spam Experts helps web hosts and ISPs/telcos strengthen email protection. Services include affordable inbound filtering driven by a continuously updated Intelligent Protection & Filtering Engine to meet emerging threats. The solution can be deployed in a redundant cloud environment or on-premises.

HOW IT WORKS

SolarWinds Spam Experts incoming spam filter is a gateway solution. Activation is done with a simple DNS adjustment. Once the MX-records are changed, all inbound email goes to our system first, where it is filtered and then relayed to the unchanged destination mail servers of your clients.

It provides first-level defense running in front of your mail infrastructure and separates legitimate from unsolicited email with the help of advanced filtering algorithms and spam pattern detection methods. It offers full inbox protection with a nearly 100% accuracy rate. Potentially harmful messages are queued in quarantine and can be managed by end users.

OVERVIEW

Helps save resources and costs

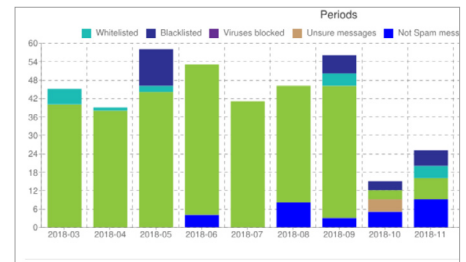

- » Protects networks against the latest email-based threats
- » Saves network resources with an efficient first-level incoming filter defense
- » Helps save money with competitive and affordable licenses

Offers dual deployment options and integrates with a broad range of tools

- » Cloud or on-premises deployment
- » Free add-ons to integrate with the most popular control panels and other email collaboration tools
- » Multiple branding options available

Gives customers and users visibility and control over their email flows

- » Empowers users to manage their email flows and gain real-time visibility into threats
- » Designed to help ensure email continuity
- » Provides regular new releases based on customer input

Global statistics

Branding management

Underneath you may find a list of all brands existing in this system. Each brand is bound to a hostname (the Premium Private Label feature). You may edit or delete an existing brand or set up a new one. Please note, that it is possible to set up only a single brand per hostname per admin.
